FIRST AID to the Injured.

Antiseptic Treatment. Any person who gives first aid to the wounded should take every precaution possible by thoroughly cleansing his hands and nails. He should then cleanse the wounds with some antiseptic. The simplest and most easily procured is salt and water. Put a handful of salt in a quart of water and use freely. After the wound is cleansed, it must then be protected from new germs by some covering made germ-free by baking, boiling or even ironing with a hot flatiron. After the salt solution has been carefully used, apply strips of muslin or gauze soaked in warm water which has been boiled. This will leave the wound in good condition.

Important. Never try to give anyone who is unconscious anything to drink as it may choke him.

Freezing. If the extremities are frost bitten, do not go into a warm room. Rub the parts vigorously with snow or water gradually warming as the frost is driven out. Apply ointment liberally. If the entire body is badly chilled, warmth is absolutely necessary to overcome the depression which will follow. Place in a warm bath, increasing the heat until it is as hot as can be borne. Hot tea or coffee and moderate quantities of alcoholic stimulants should be given.

Heat Exhaustion. The skin becomes cold and clammy. This should be treated with plenty of fresh air but no cold applications. Give strong coffee or teaspoonful of whiskey in wineglass of water.

? For treatment of Sunstroke see "Help in Case of Accidents."

Suffocation by Gas. Remove victim into the air. Perform artificial respiration as in case of drowning. Send for physician immediately. As oxygen is absolutely necessary try to get patient to hospital without delay.

Suffocation by Smoke. Take victim into the air. Perform artificial respiration as in the case of drowning. Give alcoholic stimulants.

Shock. Accidents, all severe injuries or fright may cause what is known as "shock". Keep head low. Wrap in hot, dry blankets. Apply hot water bottles or hot plates to abdomen and extremities. Apply no heat to head. If necessary give stimulants, non-alcoholic preferred. Perform artificial respiration if breathing has stopped.

HELP! In Case of Accidents.

Drowning. 1. Loosen clothing, if any. 2. Empty lungs of water by laying body on its stomach and lifting by the middle so that the head hangs down. Jerk the body a few times. 3. Pull tongue forward, using handkerchief, or pin with string, if necessary. 4. Imitate motion of respiration by alternately compressing and expanding the lower ribs, about twenty times a minute. Alternately raising and lowering the arms from the sides up above the head will stimulate the action of the lungs. Let it be done gently but persistently. 5. Apply warmth and friction to extremities. 6. By holding tongue forward, closing the nostrils, and pressing the "Adam's apple" back (so as to close entrance to stomach) direct inflation may be tried. Take a deep breath and breathe it forcibly into the mouth of patient, compress the chest to expel the air, and repeat the operation. 7. **DON'T GIVE UP!** People have been saved after HOURS of patient, vigorous effort. 8. When breathing begins get patient into a warm bed, give WARM drinks, or spirits in teaspoonfuls, fresh air and quiet.

Burns and Scalds. Cover with cooking soda and lay wet cloths over it. Whites of eggs and olive oil. Olive or linseed oil, plain or mixed with chalk or whiting.

Lightning. Dash cold water over a person struck.

Sunstroke. Loosen clothing. Get patient into shade and apply ice-cold water to head.

Mad Dog or Snake Bite. Tie cord tight above the wound. Suck the wound and cauterize with caustic or white-hot iron at once, or cut out adjoining parts with a sharp knife.

Venomous Insects' Stings, etc. Apply weak ammonia, oil, salt water or iodine.

Fainting. Lay flat with head lower than body. Loosen clothes. Give plenty of air. Keep body warm. Bathe face and hands with cold water. While unconscious, give nothing to drink. When consciousness returns, give warm drinks or a little stimulant.

Electricity. Release from current — not touching body or wire with hands, metal or a wet stick. Handle body by its clothing, with rubber gloves and shoes if possible; if not, cover hands with dry woolen cloth and stand on dry boards. Then induce artificial respiration as in a case of **drowning**. Rub limbs and massage body.

Fire in One's Clothing. *Don't run* — especially not down stairs or out of doors. Roll on carpet, or wrap in woolen rug or blanket. Keep the head down so as not to inhale flame.

ANTIDOTES FOR POISONS.

First. Send for a Physician.

Second. INDUCE VOMITING, by tickling throat with feather or finger, drinking hot water or strong Mustard and water. Swallow Sweet Oil or whites of Eggs.

Acids are antidotes for **ALKALIES**, and *vice versa*.

¼ cubic foot=about four-fifths of a bushel.

THE INTERNATIONAL METRIC SYSTEM OUTLINED.

The scale shown is just one decimeter long (1 dm.). It forms the tenth part of one meter (1 m.), just as one dime forms the tenth part of a dollar. It is seen to be divided into ten centimeters (10 cm.), each of ten millimeters (10 mm.), just as the dime is divided into ten cents, each of ten mills.

A meter is roughly a yard (1.1 yards). 1000 meters make one kilometer (1 km.), which is about $\frac{5}{8}$ mile.

A cube of one decimeter edge has a volume of one liter, which is roughly one quart. A liter, therefore, contains $10 \times 10 \times 10 = 1000$ cubic centimeter (1000 cc.).

A cubic decimeter or liter of water weighs 1000 grams (1000 gm.) = 1 kilogram (1 kg.), which is roughly 2 pounds (2.2 lbs.). A cubic centimeter of water therefore weighs 1 gram. A cubic meter measures about $\frac{1}{4}$ cord, and 1 cubic meter of water weighs 1000 kilograms (1000 kg.) or 1 metric ton, which is roughly equal to 1 long ton.

Prefixes used in the Metric System:

Milli- 1-1000 or 0.001
 Centi- 1-100 or 0.01
 Deci- 1-10 or 0.1

as in American currency.

FAMILIAR FACTS.

To find circumference of a circle multiply diameter by 3.1416.

To find diameter of a circle multiply circumference by .31831.

To find area of a circle multiply square of diameter by .7854.

To find area of a triangle multiply base by $\frac{1}{2}$ perpendicular height.

To find surface of a ball multiply square of diameter by 3.1416.

To find cubic inches in a sphere multiply cube of diameter by .5236.

To find side of an equal square multiply diagonal by .8862.

Doubling the diameter of a pipe increases its capacity four times.

A gallon of water (U.S. standard) weighs 8 lbs. $\frac{1}{8}$ oz., and contains 231 cubic inches.

A cubic foot of water contains $7\frac{1}{2}$ gallons, 1,728 cubic inches, and weighs $62\frac{1}{2}$ pounds.

To find the pressure in pounds per square inch of a column of water multiply the height of the column in feet by .434.

Steam rising from water at its boiling point (212 degrees F.) has a pressure equal to the atmosphere (14.7 pounds to the square inch).

A standard horse power: The evaporation of 30 lbs. of water per hour from a feed water temperature of 100 degrees F. into steam at 70 lbs. gauge pressure.

To find capacity of tanks any size: given dimensions of a cylinder in inches, to find its capacity in U.S. gallons: square the diameter, multiply by the length and by .0034.

To ascertain heating surface in tubular boilers multiply $\frac{2}{3}$ the circumference of boiler by length of boiler in inches and add to it the area of all the tubes.

One-sixth of tensile strength of plate multiplied by thickness of plate and divided by one-half the diameter of boiler gives safe working pressure for tubular boilers. For marine boilers add 20 per cent. for drilled holes.

BUSINESS LAWS IN BRIEF.

It is a fraud to conceal a fraud.

A note given by a minor is void.

Ignorance of the law excuses no one.

A contract made with a minor is void.

A contract made with a lunatic is void.

Notes bear interest only when so stated.

The acts of one partner bind all the rest.

An agreement without consideration is void.

A receipt for money is not always conclusive.

The law compels no one to do impossibilities.

Contracts made on Sunday cannot be enforced.

Signatures made with lead pencil are good in law.

Agents are responsible to their principals for errors.

Principals are responsible for the acts of their agents.

No consideration is sufficient in law if it be illegal in its nature.

If the time of payment of a note is not inserted it is held payable on demand.

A note obtained by fraud, or from a person in a state of intoxication, cannot be collected.

Each individual in a partnership is responsible for the whole amount of the debts of the firm, except in cases of special partnership.

If a note is lost or stolen it does not release the maker; he must pay it if the consideration for which it was given and the amount can be proven.

"Value received" is usually written in a note, and should be, but is not necessary. If not written it is presumed by the law, or may be supplied by proof.

If one who holds a check, as payee or otherwise, transfers it to another, he has the right to insist that the check be presented that day, or, at farthest, on the day following.
